

Invitation to present work digitally at the SDG Conference 2022

Dear PhDs and postdoctoral researchers,

The fifth SDG Conference Bergen will take place 9-11 February 2022 with the theme “Ways of knowing, modes of living” (see [SDG Conference Bergen | University of Bergen \(uib.no\)](https://www.uib.no/en/SDG-Conference-Bergen) for details). This fully digital conference provides new opportunities to present emerging and important research by motivated PhD students and postdoctoral researchers addressing the conference themes. We therefore invite all PhDs and postdoctoral researchers that are interested to present a digital videorecorded poster on your research and how it relates to the theme of the upcoming conference.

Digital poster details:

- Each PhD student or postdoctoral researcher may submit a (maximum) two-minute videorecorded poster (in English) by **1 February 2022**.
- The videorecorded poster could be you presenting orally into the camera your research, showing a presentation or other form of digital content using a combination of presentation techniques. This videorecorded poster should be of fairly high digital quality but may very well be recorded with your smart phone.
- For tips on how to record your poster, please see the following tips: <https://vimeo.com/456463255/f5f4da93bc>

How to upload your digital poster:

- 1) The videorecorded poster is to be uploaded to vimeo.com
Username: joa@april.no
Password: 100%posters
- 2) Name your video with your full name, and the title of the poster. Please, also, send a notification e-mail to posters@april.no once you have uploaded your video.
- 3) By **4 February 2021** you will receive notification about whether your poster is accepted. If accepted, your videorecorded poster videos will be showcased in the conference platform and available for all digital participants to view. For technical questions regarding uploading the recording, please contact posters@april.no.

This is a great opportunity to share your research with a global audience and we hope to see your presentation at the conference!

PS! Extra tips for your recording session:

- Please try to find a plain and tidy background, like a white wall.
- Be conscious of your lighting.
- Find a quiet space.
- Use your smartphone to record yourself presenting. The video and audio quality are usually a lot higher in your phone than what you would achieve from your laptop.
- Look directly into the camera while recording (that means: do not look at yourself on the screen if you are using your phone to record).
- The camera should be in landscape-mode, and the view should cover your head and shoulders.
