Navigating cognitive bias in forensic anthropology 49

A policy that requires an assessment of the biological profile in “identified” cases increases the workload and the turnaround time on casework, despite its potential utility for mitigating bias and serving as a teaching tool. It would be much more time-efficient to forgo the assessment of the biological profile and concentrate solely on trauma assessment and interpretation in these particular circumstances. Even though budgetary, time, and/or dictated policy constraints are important considerations, pure convenience should not be a primary motivating factor for laboratories’ operating procedures.
